GRACIA AND LOUISE

Help grow habitat for the Grey-headed
flying fox, our forest pollinators.

The Grey-headed flying fox is a keystone species, ensuring the survival of our native forests. If one Grey-headed flying fox is capable of flying 50 kilometres a night and dispersing 60,000 seeds, what can each of us do for nature in return?

Gould's *Grey-headed flying fox* drawn and lithographed by J. Gould and H.C. Richter from John Gould's 'The mammals of Australia', volume 3, 1863 (detail), in the collection of the State Library Victoria
